

Hi there!

We are glad that you made it this far and we hope that you will enjoy this task. Please provide us with a solution that corresponds to your understanding of the instructions. There is no timer but we estimate that it should not take more than 1.5-2 hours to complete.

Instructions:

Write a function that gets a paragraph written in English, and returns the paragraph's words sorted alphabetically. But, instead of the alphabet being in English order, the alphabet is in the Hebrew order: A, B, G, D, H, V, Z, J, T, Y, K, L, M, N, S, I, P, X, Q, R, W, U, C, E, F, O.

For Example, for the following input: "Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua".

The function should return or print the following: "adipiscing aliqua amet do dolor dolore tempor labore Lorem magna sit sed incididunt ipsum ut consectetur et elit eiusmod"

Guidelines:

- You can use whatever programming language you want.
- Comment your code when necessary, no need to over-comment.
- You should remove the punctuation from the input.
- Add general instructions (if necessary) and an example of how to use your function.
- Submission: Compress all relevant files into a ZIP file and name it <your_name>.zip

Send the ZIP file to DevBE@fullpath.com

Good Luck!
